

JavaScript For Web

Week 1, Tutorial 2

Assignment 1, Exercise 1

Create a html file called `exercise1.html` and generate a basic structure using VS code shortcut. Try to add some contents to this file.

- Contents could be anything. e.g. introduce yourself, what do you expect to learn from this course, etc.
- Check [list of predefined tags in HTML](#).
- Open `exercise1.html` using Chrome and open the browser inspector.
- The key idea of this exercise is to be more familiar with VS code, Chrome and basic HTML features.
- Run your `exercise1.html` through the W3 [HTML Validator](#). No errors should be found on your html file
- (optional): You can add URL of your Github profile to this file.
- (optional): Try to play with the browser inspector and inspect the [MDN Web docs](#)

You will create `assignment1.zip` including `exercise1.html` and submit to Canvas later.
