JavaScript For Web

Week 3, Tutorial 4

Resources for Final Project

- HTML5 UP: Free HTML website template
- Unsplash: Free images resources
- Video: What is Agile Methodology
- Video: What is Scrum (You can treat the last two weeks of this course as a **sprint** of your project.)
- NEW: Common project management softwares: Jira, Trello, Notion

Assignment 2, Exercise 3

Create a file named `exercise3.js` and create arrays and store text content for JavaScript notes. You'll need to create a `html` file on your own.

```js
const JS_NOTES_TITLE = "JavaScript Notes"

const JS_NOTES = [
  "use let or const to declare a variable, never use var.",
  "use strict equality check ===.",
  "use arrow function."
]
```

Follow the instruction in `lecuture-3-4.pdf` and create a similar dynamic note list for JavaScript notes.

You will create `assignment2.zip` including `exercise3.js` and submit to Canvas. You don't have to submit your `html` file.
