JavaScrip For Web

Week 2, Tutorial 3

Assignment 1, Exercise 5

Create a file named `exercise5.js` , write each function below and test the output with `console.log` :

1. Write a function called `lastLetter` that takes a string and **returns** the very last letter of that string:

   - `lastLetter("abcd")` should return `"d"`

2. Write a function called `capitalize` that takes a string and **returns** that string with only the first letter capitalized. Make sure that it can take strings that are lowercase, UPPERCASE or BoTh.

You will include `exercise5.js` to `assignment1.zip` and submit to Canvas later.

Don't go to the next page if you're working on this exercise.

Assginment 1, Exercise 5 Sample Solution

```javascript
const lastLetter = (str) => str.charAt(str.length - 1)

const capitalize = (str) => {
  return str.slice(0, 1).toUpperCase() + str.slice(1).toLowerCase()
}
```
